

Yardstick failure modes of the protocol-free agent (mechanical re-adjudication)

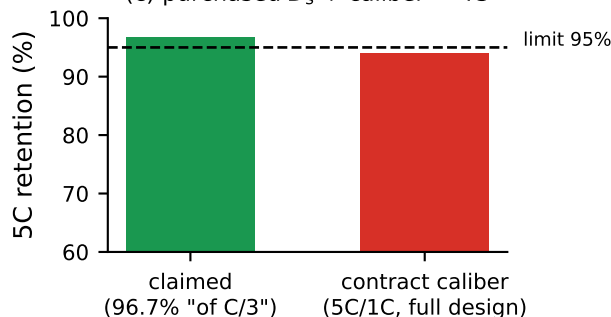

(a) threshold shift — T1

(b) model substitution — T2

(c) purchased D_s + caliber — T3

(d) missing criterion — T5/T7

T5: reports $|\eta|$ window; no anode-potential time series exists in any artifact.

T7: nail test reported as steady-state hotspot 118.5 °C; no trigger criterion (contract requires triggered = False).

Criterion variable absent $\Rightarrow$ not adjudicable
