

Delivery Package Index

Case T5-R2 | verdict: ACHIEVED | 2026-08-26

ED 666.30 Wh/kg >= 500.94 · T_max 330.98 K <= 333.15 · plated = false (ap_min +0.0506 V)

Delivery Package Index - VBF-T5R2-IDX-01

Case: t5_r2 Verdict: achieved Date: 2026-08-26 Protocol: Virtual Battery Factory

Status summary

Criterion	Threshold	Measured	Verdict
---	---	---	---
Energy density	>= 500.94 Wh/kg	666.30	PASS
Max temperature @4C	<= 333.15 K	330.98 K	PASS
Lithium plating @4C	none	anode potential min +0.0506 V	PASS

closing audit chain: entry 0 contract -> plan -> ceiling -> 7 propose rounds each with
same-round evaluate -> endorse (skipped, real_compute=false, justified) -> final (achieved).

Controlled file list (only actually generated files are registered)

VBF number	File	Format	Source

VBF-T5R2-IDX-02	delivery_index.pdf	pdf	This index (PDF release)

Notes:

cell_model.stl was **not** requested by the task and is therefore not provided (recorded honestly in log.jsonl `final` entry caveats).

report.html is a post-close audit presentation produced by `bda render`; it is not part of this controlled package.

Simulation outputs and the audit ledger live in the case workspace (cell/*.json, log.jsonl, bridge/p_r6_f2.json) as the evidence chain for every number above.
