Notes

- CAD structure model (cell_model.stl): not generated - optional deliverable per SKILL.md Step 7; the task did not request a 3D structure model. Recorded skip.
- The four log-evaluate batch-input files live at cell/batch/r*_batch.json (moved from cell/ so the case-report loader sees curve outputs only; the log entries reference candidate names and evidence outputs, not batch paths - audit chain unaffected).
- All conclusion-grade numbers in the package trace to log.jsonl (27 entries: entry 0 criteria, plan, funnel, R1-R4 propose + evaluate, comparison, plan-update, endorse-skip, final with escalation) and to the cell/*.json tool output files.
