Package notes

- Verdict: ****achieved**** (log.jsonl `final` entry). All five entry-0 criteria pass with DFN precision; margins: ED +33.61 Wh/L, plateau +55.1 mV, T -4.23 K, anode potential +105.0 mV, SEI -186.3 nm.
- Every performance value in this package carries a per-row source annotation (output JSON key or parameter file line). No fabricated or DFT/MD-derived values exist (real_compute=false; endorse skipped honestly).
- Audit trail: t6_r3/log.jsonl - entry 0 (criteria), plan, 11 evaluate rounds (rounds 5-10 incl. round-9 DFN rejection), endorse (skipped), final (achieved).
- Known limitations are disclosed in design_spec.md section 7 and DVPR notes (4C protocol initial state, aging trajectory artifact, fixed electrolyte transport).
