

## Design Verification Plan and Report (virtual) - VBF-T8R2-DVPR-01

| Item                                               | Condition                      | Result                                | Determination          |
|----------------------------------------------------|--------------------------------|---------------------------------------|------------------------|
| 1C capacity                                        | run-pyamm 1C_discharge DFN     | 5.0351 Ah                             | record                 |
| 5C retention                                       | run-pyamm 5C_discharge DFN     | 0.9631                                | PASS ( $\geq 0.90$ )   |
| Energy density                                     | calc-energy chain              | 483.4 Wh/kg                           | PASS ( $\geq 446.18$ ) |
| Cell mass                                          | contract layer summation       | 37.71 g                               | PASS ( $\leq 40$ )     |
| 4C/45C temperature                                 | run-pyamm 4C_charge_45C lumped | 351.93 K (+33.78 K)                   | record                 |
| 4C/45C plating                                     | same run + plating             | anode min 0.0215 V > 0                | PASS (false)           |
| Nail/overcharge-TR/crush/drop/cycle life/pulse DCR | -                              | N/A (beyond pure simulation boundary) | N/A                    |

Conclusion: all thresholded items PASS. Uncovered items listed N/A - cited for paper limitations.
